ForeSee View

ForeSee View is an essential scan planning tool allowing you to preview slice planning in real time to help avoid time consuming re-scans. Enabling planning from edge to edge in the region you wish to image, ForeSee View is particularly useful in anatomies that can be difficult to plan such as the pancreas, the heart, orthopedic joints, tortuous vessels and ligaments, and complex post-surgery vessels and arteries.

Advanced intelligent Clear-IQ Engine (AiCE) is the world's first fully integrated Deep Learning Reconstruction technology for MRI, producing stunning MR images that are exceptionally detailed. Harnessing the enormous computational power of a Deep Convolutional Neural Network (DCNN), AiCE is trained to restore low SNR MR data to match the properties of high SNR* images.

A comfortable patient experience enables effortless procedures

The wide bore patient aperture and in-bore immersive virtual experience enhances patient comfort. The MR Theater helps patients to relax and decrease movement, enabling clinicians to reduce re-scans and produce high-quality images.

Quiet exams prioritizing patient comfort

Canon's unique Pianissimo Σ (sigma) technology dramatically reduces the level of acoustic gradient noise, thus substantially enhancing patient comfort, especially during scanning with fast sequences. And Pianissimo Zen quiet sequences further reduce noise to just above the ambient noise level.
